

THE BUSINESS REGISTER

The Business Register is a data bank where you can find information about all the enterprises of every corporate designation and economic sector, based on the Provincial territory.

Both individual and collective enterprises are required to register and to communicate the records concerning changes and out-of-business claims.

The main function of the Business Register is legal advertisement: since the day of their registration, third parties can access all the data concerning the enterprise.

Non EU citizens, whether Italian residents or non- residents, who want to start a private business, both as individual entrepreneurs or as company partners, must apply for the following documents, subsequent to their registration:

- A declaration which certifies that there are no legal reasons to impede certification; if some specific requirements are needed, the declaration will be obtained after verification with the Chambers of Commerce.
- A document certifying the economic and financial parameters which are required in order to start a business. This document must be issued by the local Chamber of Commerce; this document will be issued only for registered enterprises.

The economic and financial document can be obtained from the proper Authority, while the declaration of no impediment must be put forward to the Business Register.
